» Container Handling  
made simple

2

## ConFoot® saves expensive equipment, time and money

The ConFoot-leg® is a Finnish invention that makes container handling very simple.

The ConFoot-legs® can be attached and removed from the four corners of a container.

Your handling equipment, trailers and other transport equipment can now be used for other purposes while containers are being loaded or unloaded.

The ConFoot-legs® are easy and light and can be handled by just one person.

1.

An air-suspended truck brings a container to its location.

2.

The driver installs the legs in just a few minutes, lowers the trailer and drives away.

3.

The container is left to be unloaded or loaded.

## Patented innovation

- Total weight 24 kg per unit
- Nominal height 1043–1448 mm
- Maximum gross weight of container 30 t
- 700 mm space between the feet keeps the container steady lengthwise
- Guarantee 2 years

### Industry and trade

- The container can be left on the ConFoot-legs in the loading dock
- The container can be loaded and unloaded where and when you want it
- Expensive (un)loading equipment is not needed anymore

### Swap body users

- No more investments in additional swap bodies
- Intermediate loadings are eliminated
- Lower transportation equipment costs

### Transportation companies

- Containers can be (un)loaded as a one-man operation
- Side loaders are replaced by ordinary trucks and trailers

### Forwarding companies

- The ConFoot-leg offers new possibilities for logistics supply chains

## New possibilities for logistics

The ConFoot-leg gives new possibilities for companies that transport or handle containers, such as.

- *Logistics centres*
- *Harbours*
- *Armed forces*
